

## POLIURETANO MULTITUBO TERMOSALDATO

Thermo welded multi core pu tubing

### CARATTERISTICHE

• Il multitubo in poliuretano termosaldato è realizzato con una tecnica di processo di saldatura che fissa i tubi in modo permanente, consentendo al contempo di separare i singoli tubi rapidamente e facilmente, senza lasciare residui. I prodotti standard sono costituiti da tubi con colori diversi e forme definite come segue, ma soluzioni personalizzate consentono di scegliere i colori in qualsiasi combinazione, con diametri diversi e combinarli in quasi tutte le configurazioni

### RESIN FEATURES

• Multi-core thermowelded polyurethane tubing is made with a proprietary bonding process technique that attaches the tubing permanently, while allowing the individual tubes to be separated quickly and easily, leaving no residue behind. Standard products are made of tubing with multiple colors and shapes defined as follow, but customized solutions allow to chose colors in any combination, mix tube sizes and stack them into almost any configuration

### LUNGHEZZE STANDARD

### STANDARD LENGTH

25-50-100 m

### SU RICHIESTA

### ON REQUEST

- Tubi di diametro diverso
- Tubi di colore diverso
- Tubi di prodotti diversi in poliuretano
- Cavi elettrici inguainati e termosaldati
- Configurazioni diverse della disposizione dei tubi
- Spirali multitubo

- Tubes of different diameters
- Tubes of different colors
- Tubes of different polyurethane products
- Sheathed and heat-sealed electrical cables
- Different layout
- Recoiled multi-tube
